Wireless Office One Step Closer With New Docking Station

16 July 2002

The capabilities of KIRK's DECT wireless telephone system solutions have been enhanced with the release of an optional handset docking station. Compatible with the KIRK Z-3040 handset supplied by Wavelink Communications, the docking station features an integrated handsfree speakerphone, desktop charger, a headset jack and a PC interface allowing easy maintenance of the handset phone directory.

The docking station is a further step down the path towards the truly wireless office. As Lee Lister, Wavelink's GM Sales commented "One of the drawbacks of cordless phones was that they did not fully replace the functionality business users were used to from their office desk telephone, particularly the handsfree speakerphone. The built-in speaker and microphone in the new docking station, along with headset jack overcome these previous objections." Lister also noted that "Maintenance of the large 80 number phone directory of the Z-3040, which previously required manual input via each handset's keypad, is made significantly simpler via the PC interface in the docking station. This innovative feature makes duplication and backup of common phone lists amongst a fleet of handsets a breeze, saving large amounts of time."

Wavelink Communications (www.wavelink.com.au) specialises in the supply, marketing and support of a range of leading edge digital wireless voice and messaging solutions. Wavelink is also the exclusive Australian distributor for a range of products from Kirk telecom A/S (Denmark www.kirktelecom.dk) and DeTeWe AG (Germany www.detewe.de).
